

SRI MADHAV

Blockchain & Web3 — Builder · Analyst · Infrastructure Operator

Lucknow, Uttar Pradesh, India | srimadhav47@gmail.com | github.com/srimadhavsats | linkedin.com/in/sri-madhav-97671ab3 | x.com/srimadhav_btc | srimadhavsats.github.io/sats-portfolio

PROFESSIONAL SUMMARY

Web3-native technologist with a **14-year history in the crypto ecosystem** (first Bitcoin transaction in 2012) and **5.3 years of enterprise QA/analysis experience** on Google hardware programs at GlobalLogic. Ships products end-to-end: a Solidity/Foundry AMM DEX, quantitative crypto analytics platforms (Python/FastAPI + React), and real-time market-data pipelines. Operates validator/verifier nodes on Linux VPS infrastructure, daily-drives Arch Linux, and brings hands-on depth across DeFi, wallet architecture, cross-chain bridging, on-chain analysis and market microstructure spanning 10+ chains. Seeking a Web3 role where genuine ecosystem depth and a builder's work ethic compound.

TECHNICAL PROJECTS

Sats Swap — Minimal AMM Decentralized Exchange

github.com/srimadhavsats/sats-swap

- Built a modular DEX from scratch on the constant-product AMM model ($x \cdot y = k$): **SatsSwapPair** (reserves & swap math), **SatsSwapFactory** (pair registry/deployment) and **SatsSwapRouter** (user entry, approvals, pair routing).
- ERC-20 compatible with mock implementations and a comprehensive Forge test suite.

Tech: Solidity 0.8.20 · Foundry/Forge · ERC-20 · DeFi/AMM design

Sats Hack Flow — Blockchain Hack & Forensic Visualizer

github.com/srimadhavsats/sats-hack-flow

- Interactive fund-flow bubble maps, contract call-trace inspector and OSINT toolkit across 20 major smart-contract hacks (2016–2025, incl. the \$1.46B Bybit heist).
- Built a live on-chain address tracer pulling real Ethereum data via raw **JSON-RPC** (`eth_getBalance` / `eth_getTransactionCount` / `eth_getCode`), enriched by the keyless **Blockscout REST API** (entity labels, ENS, recent transfers) — keyless and fully client-side.

Tech: React 18 · Vite 5 · vis-network · JSON-RPC · Blockscout v2 API · HTML5 Canvas

Eagle Eye — Macro Crypto Intelligence Hub

srimadhavsats.github.io/eagle-eye

- Quant analytics platform modeling long-term digital-asset trends: logarithmic regression bands, Bull Market Support Band (20W SMA / 21W EMA), MVRV Z-Score, NUPL and Puell Multiple on-chain valuation models, plus a live halving countdown.
- Integrates macro benchmarks (DXY, CPI YoY, Fed funds, Treasury yields, S&P 500, gold) and live Bitcoin fee/mempool data; CI pipeline runs backend security audits and auto-deploys the frontend.

Tech: Python · FastAPI · Pandas/NumPy · React · Vite · Tailwind · Recharts · GitHub Actions

SATS Trading Monitor — High-Frequency Market Telemetry

sats-trading-monitor.vercel.app

- Decoupled async pipeline streaming live exchange order-flow to browsers over WebSockets: ingestion engine, connection coordinator and resilient React visualization layer with automated anomaly detection and volatility metrics.
- Hardened against Cross-Site WebSocket Hijacking via origin verification; input sanitization and env-isolated config; pytest CI.

Tech: Python asyncio · FastAPI WebSockets · httpx · React 18 · Bybit API · pytest

C2 Intel-Net — Real-Time Crypto/AI News Command Center

srimadhavsats.github.io/cnc-crypto-dash

- Cyberpunk-styled dashboard aggregating live RSS feeds (Cointelegraph, Decrypt, Blockworks, CryptoSlate, VentureBeat) with sentiment/priority tagging, dynamic custom-feed ingestion, buffering/recycling, and alert simulation.

Tech: React 19 · Vite 8 · custom CSS · RSS/rss2json pipeline

PROFESSIONAL EXPERIENCE

Web3 Technical Infrastructure & Community Operations — Independent

2012 – Present

Infrastructure Operator · Community Administrator · Researcher (Remote)

- Deployed and maintained validator/verifier nodes for incentivized networks across VPS providers (Contabo, AWS, Oracle) using terminal-first workflows (SSH, Putty/Termius).
- Diagnosed RPC latency and node desynchronization by parsing raw JSON-RPC payloads (eth_blockNumber, balanceOf) directly from the CLI.
- Administrator of Telegram node-running and Discord Bitcoin communities: debugged users' cross-chain bridging failures, stuck transactions and gas configuration; trained newcomers in self-custody and seed-phrase security.
- Conducted multi-chain transaction forensics, including sweep-pattern analysis of institutional hot wallets via historical BSC block states.
- Active power-user across every major cycle: DeFi staking/LP farming, NFTs, airdrops (incl. Terra domain-mint airdrop), perp DEXs, DePIN, decentralized social (NOSTR, Lens, Farcaster) and decentralized domains across 10+ ecosystems.
- Developed and executed a 4-EMA + VWAP/MACD/RSI futures scalping system across ~1,000 trades with disciplined risk management.

GlobalLogic — client: Google

May 2019 – Aug 2024

Quality Analyst · Subject Matter Expert / Trainer · Senior Analyst (Gurugram, India)

- Ran QA operations and edge-case verification loops improving 50+ production AI/ML models across Google hardware lines (Nest Cam, Nest Hub, Sound Sensing, Fitbit, Pixel).
- Acted as liaison between Google's requirements and internal engineering/QA teams — clarifying specs, aligning the team and unblocking delivery.
- Designed onboarding blueprints and personally trained 400+ analysts, team leads and QA managers.
- Raised team quality from a 95% baseline to a sustained 98%, supporting continuous multi-year project renewals.

SKILLS

Blockchain & Web3: Bitcoin · Ethereum/EVM · Solidity · Foundry · DeFi & AMM mechanics · wallet architecture · cross-chain bridging · gas optimization · node operation · JSON-RPC · NFTs · Lightning Network · ENS/decentralized domains · airdrop strategy

Development: Python (FastAPI, asyncio, Pandas) · JavaScript/React · HTML/CSS · C/C++ · SQL · Git/GitHub Actions · WebSockets · REST APIs

Infrastructure: Arch Linux (daily driver) · Linux CLI · VPS (AWS, Oracle, Contabo, PQ Hosting) · SOCKS5 proxies · self-hosted LLMs (DeepSeek, Qwen, Llama)

Markets & Analysis: technical analysis (EMA, VWAP, MACD, RSI, S/R) · order-flow & market microstructure · on-chain analysis · fundamental research · risk management

Quality & Communication: enterprise QA · edge-case documentation · client-facing coordination · training & mentoring · technical writing

EDUCATION

B.Tech, Computer Science & Engineering

Dr. A.P.J. Abdul Kalam Technical University (AKTU) — 2018

Focus: Automata Theory · Data Structures · Operating Systems · DBMS (SQL)

AWARDS

- **Brainiac Award**, GlobalLogic — workflow & process innovation.
- **Alpha Player Award**, GlobalLogic — top performance, rapid resolution, mentoring.
