

SRI MADHAV

Blockchain Developer | On-Chain Analyst | Web3 Technical Operations

Lucknow, Uttar Pradesh, India (Open to Remote) | srimadhav47@gmail.com | linkedin.com/in/sri-madhav-97671ab3 | github.com/srimadhavsats | srimadhavsats.github.io/sats-portfolio

PROFESSIONAL SUMMARY

Blockchain and Web3 technologist with **5+ years of enterprise QA, analysis and SME experience** delivered for Google hardware programs at GlobalLogic, plus **14 years hands-on in the crypto ecosystem since 2012**. Builds and tests production Solidity smart contracts, Python/FastAPI data services and React analytics dashboards. Operates validator and RPC nodes on Linux VPS infrastructure across 10+ EVM and non-EVM networks, and performs on-chain transaction forensics using JSON-RPC and block explorer APIs. Track record of raising team quality output from a 95% baseline to a sustained 98% and training 400+ analysts and QA leads.

PROFESSIONAL EXPERIENCE

Independent Blockchain Engineer and On-Chain Analyst

Aug 2024 - Present

Self-Employed, Lucknow, India (Remote) - full-time; independent practice since 2012

- Designed, built and tested five production-grade Web3 applications spanning Solidity smart contracts, Python backend services and React front ends; all code published to public repositories with **CI/CD pipelines via GitHub Actions**.
- Deployed and maintained validator and verifier nodes for incentivized networks across **AWS, Oracle Cloud and Contabo** VPS environments, using Linux CLI provisioning, **Docker** containers and monitoring to sustain uptime.
- Diagnosed RPC latency, node desynchronization and failed transactions by parsing raw **JSON-RPC** payloads (`eth_getBalance`, `eth_blockNumber`, `balanceOf`) and analyzing logs from the command line, applying structured **root cause analysis**.
- Performed multi-chain transaction forensics using **block explorer APIs (Etherscan, Blockscout)**, including sweep-pattern analysis of institutional hot wallets, and documented fund-flow paths for 20 major smart contract exploits from 2016 to 2025.
- Administered Telegram and Discord communities of **2,000+ members**, providing L2/L3-style technical support: cross-chain bridging errors, stuck and underpriced transactions, gas configuration and self-custody security.
- Built and executed a systematic futures trading framework (4-EMA confluence with VWAP, MACD and RSI confirmation) across approximately 1,000 trades under predefined position-sizing and risk-management rules.

GlobalLogic (a Hitachi Group Company) - Client: Google

May 2019 - Aug 2024

Quality Analyst / Subject Matter Expert / Senior Analyst, Gurugram, India

- Led edge-case verification and error-analysis loops that improved **50+ production AI/ML models** powering Google Nest, Fitbit and Pixel hardware features.
- Raised team quality output from a **95% baseline to a sustained 98%** by redesigning review criteria, building calibration checklists and standardizing defect-reporting workflows.
- Served as primary liaison between Google stakeholders and internal engineering, product and QA teams, translating client requirements into test plans, acceptance criteria and escalation paths.
- Designed onboarding programs and trained **400+ analysts, team leads and QA managers**; authored edge-case documentation and process improvement logs.
- Analyzed large-scale hardware telemetry data and translated anomalies into structured, actionable bug-tracking and incident reports. Progression: Associate Analyst to Analyst to Senior Analyst to Quality Analyst.

TECHNICAL PROJECTS

Sats Swap - Automated Market Maker (AMM) Decentralized Exchange

github.com/srimadhavsats/sats-swap

- Built a modular DEX from scratch on the constant-product AMM model (Uniswap V2 style): SatsSwapPair (reserves and swap math), SatsSwapFactory (pair registry and deployment) and SatsSwapRouter (user entry, approvals, routing).
- ERC-20** compatible with mock token implementations and a comprehensive **unit test** suite in Foundry (Forge).

Tech: Solidity 0.8.20, Foundry (Forge, Anvil), ERC-20, EVM, DeFi/AMM design

Sats Hack Flow - Blockchain Forensic and Incident Visualizer

github.com/srimadhavsats/sats-hack-flow

- Interactive fund-flow graphs, contract call-trace inspection and OSINT tooling covering 20 major smart contract exploits from 2016 to 2025, including the 1.46B USD Bybit incident.
- Built a live on-chain address tracer querying real Ethereum data via raw **JSON-RPC** with multi-endpoint failover, enriched by the **Blockscout REST API** for entity labels, ENS names and transfer history.

Tech: React 18, Vite, JSON-RPC, REST APIs, Blockscout API, vis-network, HTML5 Canvas

Eagle Eye - Macro Crypto Analytics Platform

srimadhavsats.github.io/eagle-eye

- Quantitative analytics platform implementing logarithmic regression bands, Bull Market Support Band, and on-chain valuation models (MVRV Z-Score, NUPL, Puell Multiple), integrating multiple external **REST APIs** returning JSON.
- Automated **CI/CD** pipeline runs backend security audits and deploys the frontend on every push.

Tech: Python, FastAPI, Pandas, NumPy, React, Vite, Tailwind, Recharts, GitHub Actions

SATS Trading Monitor - Real-Time Market Data Pipeline

sats-trading-monitor.vercel.app

- Decoupled asynchronous pipeline streaming live exchange order-flow to browsers over **WebSockets**, with automated anomaly detection, volatility metrics and a resilient React visualization layer.
- Hardened against Cross-Site WebSocket Hijacking via origin verification, with input sanitization, environment-isolated configuration and automated tests (pytest).

Tech: Python (asyncio), FastAPI, WebSockets, REST APIs, httpx, React 18, pytest

C2 Intel-Net - Real-Time News Aggregation Dashboard

srimadhavsats.github.io/cnc-crypto-dash

- Dashboard aggregating live multi-source RSS feeds with sentiment and priority tagging, dynamic custom-feed ingestion, buffered streaming and alerting.

Tech: React 19, Vite, RSS ingestion pipeline

TECHNICAL SKILLS

Smart Contracts and Blockchain: Solidity 0.8.x, Foundry (Forge, Anvil), EVM, ERC-20 token standard, AMM and constant-product market makers, gas optimization, unit testing, contract deployment, Bitcoin, Ethereum, BNB Smart Chain, Polygon, Solana, cross-chain bridging, wallet architecture, self-custody security, DeFi protocols

Node and Infrastructure Operations: validator and RPC node deployment, JSON-RPC, Linux (Arch, Ubuntu), CLI and shell workflows, Docker, VPS provisioning (AWS, Oracle Cloud, Contabo), SSH, monitoring and alerting, incident debugging, uptime management

Programming and Data: Python (FastAPI, asyncio, Pandas, NumPy), JavaScript, React 18/19, Vite, WebSockets, REST API design and integration, JSON, SQL, C, C++, Git, GitHub Actions, CI/CD pipelines

Analysis and Quality Assurance: on-chain forensics and transaction tracing, block explorer APIs (Etherscan, Blockscout), root cause analysis, test case design, edge-case verification, incident reporting, log analysis, AI/ML model evaluation, anomaly detection, technical analysis (EMA, VWAP, MACD, RSI), market microstructure, risk management

Professional: stakeholder management, client liaison, technical documentation, training and mentoring (400+ trained), cross-functional collaboration, fluent English (written and verbal), 4+ years remote work

EDUCATION

Bachelor of Technology (B.Tech.), Computer Science and Engineering

2018

Dr. A.P.J. Abdul Kalam Technical University (AKTU), Uttar Pradesh, India

Coursework: Data Structures, Operating Systems, Database Management Systems (SQL), Automata Theory

AWARDS

- **Brainiac Award**, GlobalLogic - for pitching workflow and technical process innovations.
- **Alpha Player Award**, GlobalLogic - for top performance, deadline management and rapid ticket resolution.
